

Welcome to Canada 3.0

Increase R&D spending and job creation

As nation we have expand military spending for the aviation and navy sector to be up to date on technology. At the same time jobs will be created. The department of defense should assess the needs and a contest should be made. The most important thing is it must be made in Canada if it is boat or plane.

Space exploration should be a top priority in Canada when it comes to launch a satellite or sending people on the moon/beyond mars. With multiple contests in Canadian universities it will attract local and foreign entrepreneurs.

As for revenues: New environmental tax on oil for market and abroad.

For the USA this will be done buy at least 50% buy out of all key players in the transportation for oil. If we can pay 1.40 a litre , US citizens can pay 1 a litre for 4 \$ a gallon. The most important to thing remember is Canadian oil from tar sands must produce in Canada and never be returned in for resale. This means having refineries and oil reserves. As for the US portion (buying oil transport companies) 0.30cent by 4 litres is 1.20\$ a gallon. Revenue numbers: usa there is at least 268 millions cars according to USstat. Average tank in usa is 50 gallons **1.20***268 millions *2(fill up tank)*4weeks*12 months= 5 400 000 000 000\$. Nafta negotiation oil should be on of the products that should be taxed up to full potential.

R: 30 873 600 000 \$- x(buy out money estimate)The liquidity needs for the buy out transport companies sell us treasuries and should avoid buy more in future or rebalance the books with other currencies(rembini yan) etc.

Canada should become a liberal economical platform with everyone including Russia, China etc.

Note : creativity, discretion is the best weapons for the future.
