

I believe the budget should include support to

1. Continue the carbon pricing if not increase it and send refunds to taxpayers so that people will understand how it is being used.
2. **Stop** fossil fuel exploration and do NOT support research.
3. Spend money on retrofitting buildings which will produce jobs. I am glad that the government is supporting getting rid of oil wells although effort should be made to make old companies responsible for the cost and the work.
4. Invest extensively in clean energy

With thanks,

Janet Haddock
